

Firming day cream

with ginger root extract and almond oil

Morning energy

We have created for you day firming cream with ginger root extract (Zingiber officinale).

The delicate consistency of the cream, its fresh whiteness and nice fragrance make morning care a pleasure. An appropriate proportion of carefully selected active ingredients makes this cream particularly suited as a makeup base. A well cared for, beautiful feminine face is her perfect distinguishing feature.

Ingredients:

Ginger root extract – use of ginger in medicine and beauty care traces back to ancient Greece. It stimulates microcirculation, which increases the natural oxidisation of skin. It also counters the skin aging process.

Hyaluronic acid and collagen – are very well established in cosmetology, increasing the firmness and elasticity of skin, preventing loss of water through the epidermis and making skin look visibly younger.

Almond oil – it is appropriate for all skin types but is especially good for sensitive skin. It is rich in unsaturated fatty acids, increasing the speed of skin regeneration and strengthening the skin. It evens out the skin tone and relieves skin inflammation. It has been used for centuries in Mediterranean countries as one of the best substances in beauty care.

Pantothenic acid – vitamin B5 is a natural component of our skin and hair necessary for their proper functioning. D-panthenol used in the cream is called provitamin B5. It penetrates deep skin layers, reduces loss of water through the epidermis and moisturises effectively. It enhances the skin's lipid barrier. It soothes and regenerates the skin.

Ensuring matt finish and smoothing complex – a specially composed formula perfectly smoothes the skin giving it a matt finish and covering its defects. It does not dry up your skin and is perfect as a makeup base.

UV filters – daily cream is a comprehensive cosmetic, so it protects the skin against UV radiation thanks to sun filters.
