

Regenerating and moisturising night cream

with ginger root, truffle extract and almond oil

Full regeneration

A gentle night cream with regenerating and moisturising properties. Carefully selected active ingredients used in perfectly balanced proportions ensure that when used systematically, it will make your face even more beautiful.

Ingredients:

Ginger root extract – improves microcirculation, which increases natural skin oxidation. It also prevents skin aging.

Hyaluronic acid and collagen – increase the firmness and elasticity of skin, preventing loss of water and making skin look visibly younger.

Truffle extract – white truffle (*Tuber aestivum*) extract enhances skin resistance and protects it against premature aging. It contains amino acids thanks to which the skin is perfectly moisturised.

Almond oil – is rich in unsaturated fatty acids, increasing the speed of skin regeneration and strengthening the skin. It evens out skin tone and relieves inflammation.

Vitamin E – has phenomenal properties of neutralising free radicals. It protects the skin against external factors and prevents the occurrence of wrinkles.

D-panthenol – is called pro-vitamin B5 and is a natural component of our skin and hair necessary for their proper functioning. It penetrates deep skin layers, reduces loss of water through the epidermis and moisturises the skin effectively.
